bachelor of science in architecture
The study of architecture at Taubman College combines the disciplinary rigor of an architectural education with the breadth of the liberal arts within the context of a faculty engaged in creative practice and cutting-edge research.”

Sharon Haar, Architecture Program Chair
Visit to Tengger Caldera in East Java, Indonesia as part of a spring travel course.

Prospective students who have not attended an institution of higher education after graduating from secondary school, and are able to show a demonstrated interest in architecture that can be translated in a portfolio, are encouraged to apply for freshman admission. Demonstrated interest may include: taking visual art, CAD, or drafting classes; making things from imagination or invention (e.g. graphic design, furniture, sewing, crafts, costumes, theatre sets, etc.); experience with rendering software, digital technology (e.g. laser cutting, CNC machines, rapid prototyping, robotics, etc.) or woodshops; attending an architecture magnet high school, summer program, or after-school program; or working at an architecture firm.

Admission to Taubman College as a freshman student is highly competitive. Prospective architecture students are encouraged to investigate preferred admission or application to another University of Michigan program such as the College of Literature, Science, & the Arts (LSA) and one of the following schools or colleges as incoming freshmen: the College of Literature, Science, and the Arts (LSA), the College of Engineering, or the Stamps School of Art & Design. Each institution will independently review and issue an admission decision for dual applications.

The Early Action deadline for LSA, the College of Engineering, and the Stamps School is November 1st.

High school preparation
The most important consideration for students interested in studying at the University of Michigan is the quality of the core college preparatory curriculum. Students should elect advanced placement, international baccalaureate, honors, enriched, and accelerated high school courses when appropriate and possible.

Recommended additional courses if available: 2D/3D design, Visual art, CAD, or drafting class; woodshops; graphic design; participation in architecture or design focused summer programs or high schools.

Application
Please visit taubmancollege.umich.edu/apply/architecture for detailed information about the bachelor of science in architecture requirements, application instructions, to schedule a visit, and to view sample schedules and course descriptions.
Current U-M students have the opportunity to engage in over 200 disciplines as part of a liberal arts curriculum at a world-class university. Taubman College faculty recognize the value of a liberal arts education to the shaping of a designer. In preparation for the architecture curriculum, students complete between 60-70 credit hours and follow a curriculum of prescribed prerequisite architecture courses. Within these requirements there remains ample opportunity for students to select coursework and electives of individual interest. U-M students who elect to continue their pursuit of architecture, apply to Taubman College at the end of sophomore year for junior level entry. Once enrolled, students begin an intensive architecture curriculum that provides a firm foundation in the vocabularies, principles, skills, techniques, and knowledge of a broad range of environmental design determinants that are essential to professional work in architecture.

**Application**
The application deadline for cross-campus transfer applicants is February 1st annually. A portfolio of visual work, including pre-architecture courses, is required; the annual portfolio deadline is March 10th.

Students are also able to complete the first two years of course work at any accredited community college, college, or university other than the University of Michigan. Prior to beginning the undergraduate program junior year, applicants must complete a minimum of 60 credit hours/90 quarter hours, up to a maximum of 70 credit hours/105 quarter hours of prerequisite courses. See the reverse side of this brochure for requirements. Complete transfer guides are available at taubmancollege.umich.edu/applyundergraduate

Ideally, this course of study requires four and one-half years (nine terms/full time) for completion. The first two years will be done externally with the remaining two years to be completed at the University of Michigan and Taubman College. Usually, new transfer students apply to Taubman College during winter term of their sophomore year. New transfer students begin architecture study in an intensive summer half-term prior to their junior year to facilitate a smooth transition to the Taubman College studio culture.

**Application**
Please visit taubmancollege.umich.edu/applyarchitecture for detailed information about the bachelor of science in architecture requirements, application instructions, to schedule a visit, and to view sample schedules and course descriptions.
bachelor of science
required courses (120 credits)

1 English composition course (4 credits)
1 calculus course (4 credits)
1-2 physics courses (lecture and lab) (5-10 credits)
2-3 introductory architecture/art studios (6-9 credits)
2 history of architecture courses (6 credits)
1 digital drawing course (3 credits)
2 humanities courses (6 credits)
2 social science courses (6 credits)
1 natural science course (3 credits)
4-5 architectural design studios (24-30 credits)
2 design fundamentals courses (6 credits)
2 construction courses (6 credits)
2 structures courses (6 credits)
2 sustainable systems courses (6 credits)
6-9 elective courses (20-36 credits)

Please visit taubmancollege.umich.edu/applyundergraduate for more detailed information about our undergraduate architecture degree, application instructions, to schedule a visit, or to register as a prospective student.

For more information, please visit: taubmancollege.umich.edu/architecture
master of architecture
Taubman College’s graduate professional degree in architecture is a studio intensive degree that takes a critical view of design, theory, and production. Professional coursework and electives in topical areas supplement the traditional design education model. The combination of professional coursework and coursework in representation, history, and theory prepares students to engage in a research-based thesis design project as their final studio. The program offers a wide-array of electives in history/ theory, criticism, structures, environmental and construction technology, urbanism, sustainable design, computation, and digital fabrication. It is enhanced by its context that includes urban planners, urban designers, doctoral students, and post-professional students concentrating in conservation, material systems, design and health, and digital technology.

The college recognizes the value of perspective gained from university-wide and discipline-wide collaborations and encourages students to utilize the resources available at a premier research institution. Students who earned an undergraduate degree in architecture complete the program in two years. Students who hold an undergraduate degree in other disciplines should expect to follow the 3-year master of architecture course of study.

3-year master of architecture
Taubman College’s 3-year master of architecture degree is designed for applicants who received an undergraduate degree in a discipline other than architecture. This 105-credit-hour degree draws upon the diverse backgrounds of the students to encourage a multi-faceted discussion of architecture. The first year builds a foundation that drives the following years; students join their peers in the 2-year master of architecture track for the second and third years. To be eligible for admission, students must hold an undergraduate degree in any field and have fulfilled the two required prerequisite courses: 1 calculus course and 1 physics course with lab. Two studio art courses are also strongly recommended. Coursework for the 3-year master of architecture degree begins in late June.

2-year master of architecture
Taubman College’s 2-year, 60-credit-hour, master of architecture degree is designed for applicants who hold a bachelor of science degree in architecture or its equivalent.

A strong architectural design portfolio consisting of a minimum of four studios and previous coursework that fulfills the majority of required courses in the first year of our 3-year curriculum is required. Applicants to the 2-year degree whose undergraduate work does not meet these criteria will be considered for admission to the 3-year degree. The M.Arch. degree is accredited by the National Architectural Accrediting Board (NAAB).

application
Please visit taubmancollege.umich.edu/applyarchitecture for detailed information about the 2-year and 3-year master of architecture requirements, application instructions, to schedule a visit, and to view sample schedules and course descriptions.
3-year master of architecture
required courses (105 credits)

7 architectural design studios* (42 credits)
1 thesis development seminar (3 credits)
1 design fundamentals course (3 credits)
1 architectural representation course (3 credits)
1 architectural theory + criticism course (3 credits)
1 architectural history course (3 credits)
2 building construction courses (6 credits)
2 sustainable systems courses (6 credits)
2 structures courses (6 credits)
1 professional practice course (3 credits)
4 architecture elective courses (12 credits)
5 elective courses (15 credits)

2-year master of architecture
required courses (60 credits)

4 architectural design studios* (24 credits)
1 thesis development seminar (3 credits)
1 architectural representation course (3 credits)
1 architectural theory + criticism course (3 credits)
1 professional practice course (3 credits)
3 architectural electives (9 credits)
5 elective courses (15 credits)

*During the final year, 2-year and 3-year Master of Architecture students research a thesis topic that culminates in a design project. This design project serves as the final studio.

taubmancollege.umich.edu/architecture
master of science in architecture: conservation
one year of focused design research
Modern and pre-modern landscapes, environments, and cultural sites are at risk of being destroyed or altered to such a degree so as to lose their original relevance. Conservation combines a deep affection for, and knowledge of heritage with, an understanding of how the past might enhance the vitality of contemporary neighborhoods and cities. The Master of Science in Architecture concentration in Conservation (MS_C) offers participants an innovative approach to connecting physical, social, and ecological contexts as a means of probing architecture’s active role in the construction of culture.

This concentration expands conventional notions of historic preservation to encompass the multiple scales that shape the cultural and environmental heritage of a community and its region. A holistic approach towards conservation has proved to be a highly effective element in community organizing and neighborhood identity, as well as a highly effective economic development strategy. Participants will focus on socio-cultural artifacts of memory and the role of conservation in the physical embodiment of historiography of architecture and landscape. The program is designed for participants who have an affinity for the architectures and landscapes of the past and who want to take an active role in defining a better present and future.

The degree coursework combines activism and entrepreneurship and allows participants to analyze historic districts, sites, landscapes, and territories as well as propose alternatives for the future. The program builds upon faculty expertise in areas of cultural history and memory, material science, environmental sustainability, social justice, and community development. It will combine technical training in conservation methods from outstanding practitioners, perspectives on urban history, urban design, community organizing, economic development, and public policy.

Taubman College is home to advanced technology, including state-of-the-art documentation equipment, the Geographic Information Systems resources available at the SAND Lab, and rapid prototyping equipment available in the Digital Fabrication Lab. As a nexus for interdisciplinary research and learning the University of Michigan fosters an expanded concentration discourse and the potential for cross campus collaborations.

application
Please visit taubmancollege.umich.edu/applyarchitecture for detailed information about the master of science in architecture requirements, application instructions, to schedule a visit, and to view sample schedules and course descriptions.
MS_C Required Courses

The Master of Science in Architecture degree requires the completion of 36 credit hours carried out in 3 terms (10 months).

ARCH 716 – Theories in Conservation
This course will examine major issues in conservation theory and practice, and will concentrate on those topics of contestation and inquiry that define the field for design professionals. Topics will range from techniques of documentation and physical renovation to conservation as economic development to issues of neighborhood organization and social equity.

ARCH 717 – Documentation in Conservation
This course will focus on techniques for the documentation and analyses of existing structures and/or sites. Students will receive training in state-of-the-art digital technology such as photogrammetry and rectified photography recording methods. In addition, the course will help students develop valuable skills through research of primary and secondary archival resources. The course will examine the history of documentation in the context of drawing techniques and standardized representational formats (such as HABS).

ARCH 553 – American Architecture
This course will explore the transformations in American architectural theory and practice from the early nineteenth century to the present, with emphasis on elucidating the leading struggles for definition, meaning, and form in the architecture of this period. Also considered is the link between theory and practice, the relationship between conceptual and aesthetic as well as technical factors, and the cultural, economic, social, and political context out of which they evolved.

ARCH 714 – Master of Science in Architecture Proseminar
The Proseminar will engage interdisciplinary work, projects and scholarship related to the MS areas of concentration (digital technologies, material systems, conservation, and design and health) — through lectures, class discussion, and guest lectures including experts in the MS concentration areas.

ARCH 700 – MS Practicum in Conservation
The Practicum applies knowledge attained from the prerequisite courses towards project-based work in a ‘design laboratory’ setting. Students will work individually and collaboratively on topics framed by the faculty’s research focus.

739-101 – MS Capstone in Conservation
The Capstone is an intensive team-based research project under the direction of the Capstone faculty. The project is intended to be related to the research of the faculty as a means to investigate innovative aspects for the application of conservation. This work will be executed collaboratively in a format defined by the scope and demands of the project.

In addition to dedicated courses within the concentration, students are able to take 4 elective courses to advance their knowledge of related topics. A minimum of two of these electives must be university electives that allow for a connection to the university at large in order to gain exposure to research methodologies beyond the discipline.

For more information, please visit: taubmancollege.umich.edu/msc
master of science in architecture: design and health
one year of focused design research
The built environment has a powerful impact on our bodies, fitness, and well-being. The Master of Science in Architecture concentration in Design and Health (MS_DH) examines a range of scales including interiors, buildings, cities, and territories that promote a critical assessment of existing design practices. Students in the MS_DH concentration pursue new opportunities for design and architecture to positively influence health infrastructure by addressing inequalities, while drawing from numerous allied fields through design.

Design Health is positioned as a crucial, global concern in light of rapid technological change, innovation in science, and emerging, critical theories in the humanities. In the MS_DH concentration, design is understood as a relational structure that navigates the constantly changing contours between the sciences and humanities. As forms of cultural production, health-related design issues are distributed between medical models and social models, with the medical model acting as the dominant paradigm. Students explore the confluence of these models, while developing design thinking in order to produce new methodologies and new ways of effectively engaging the complex relationships between design and health in a global context.

Within a 21st century context, MS_DH students develop new frameworks for debate regarding: the role of design in expanding healthy lifestyles, the challenges of structural-level disparities in access to healthcare facilities and amenities, and the way that design processes are embedded in pathological social systems. The concentration combines case study and action-based methods in order to deploy multi-disciplinary approaches to understanding health as an individual and collective challenge. Projects range from asymmetrical design explorations to policy innovations on issues ranging from resource allocation and zoning to transport and agricultural infrastructure. Areas of study include: the human body, disparate access to healthcare, hospitals and institutional health systems, and environmental conditions that influence health outcomes.

As urbanization continues to affect health, the impact of urban design will be of particular interest in examining the interplay between population density, transport infrastructure, access to food and water, and overall health.

Each MS_DH student will chart a relationship between architecture, design, social science, engineering, history, public health, public policy, and medicine. New forms of practice can emerge, as well as new forms of collaboration, from basic scientific research to technological interfaces within designed objects and buildings.

The University of Michigan is a robust constellation of academic, professional, and clinical units with which to partner, including but not limited to subject areas of medicine, pediatric medicine, geriatrics, psychology, public health, public policy, obesity, sociology, art and design, kinesiology, and biomechanics.

**application**

Please visit taubmancollege.umich.edu/applyarchitecture for detailed information about the master of science in architecture requirements, application instructions, to schedule a visit, and to view sample schedules and course descriptions.
MS_DH required courses

The Master of Science in Architecture degree requires the completion of 36 credit hours carried out in 3 terms (10 months).

ARCH 726 – Theories in Design Health
This course provides students with an understanding of the multitude of definitions of health across the globe, over time, and in various demographic realms. Students will become familiar with the nexus of disciplines and professions which enable and constrain design health.

ARCH 727 – Health: Individual Infrastructures
This course covers topics related to individual health and will examine the role of design in determining the metrics of individual health within domestic, work, and recreational environments. Participants will examine the body at rest, work, and play in specific spatial and environmental contexts determining disparities in which such activities that place and resolving the mechanics of the infrastructural differences.

ARCH 728 – Health: Civic Infrastructures
This course will cover topics related to the features of heterogeneous populations at rest, work, and play, and in the specific spatial and environmental contexts in which such activities take place. The collective behavior of civic infrastructures is closely associated with ecologies and systematic conditions of healthcare and healthcare access across multiple home, work, and recreational environments.

ARCH 714 – Master of Science in Architecture Proseminar
The Proseminar will engage interdisciplinary work, projects and scholarship related to the MS areas of concentration (digital technologies, material systems, conservation, and design and health) — through lectures, class discussion, and guest lectures including experts in the MS concentration areas.

ARCH 700 – MS Practicum in Design Health
The Practicum applies knowledge attained from the prerequisite courses towards project-based work in a ‘design laboratory’ setting in preparation for the capstone. Students will work individually and collaboratively on topics framed by the faculty’s research focus.

739-101 – MS Capstone in Design Health
The Capstone is an intensive team-based research project under the direction of the Capstone faculty. The project is intended to be related to the research of the faculty as a means to investigate innovative aspects for the application of design and health. This work will be executed collaboratively in a format defined by the scope and demands of the project.

In addition to dedicated courses within the concentration, students are able to take 4 elective courses to advance their knowledge of related topics. A minimum of two of these electives must be university electives that allow for a connection to the university at large in order to gain exposure to research methodologies beyond the discipline.

For more information, please visit:
taubmancollege.umich.edu/msdh
master of science in architecture: digital technologies
one year of focused design research
As architecture integrates advanced technologies from the aerospace, automotive, and shipbuilding industries, it has altered both the way buildings are conceived and manufactured. Computer-aided design/manufacturing technologies have forced architects to reconsider their role in response to an influx of complex performance requirements, changing contractual relationships, and multidisciplinary collaborations.

The Master of Science in Architecture concentration in Digital Technologies (MS_DT) not only allows for hands-on direct engagement with technology but challenges students to explore different design theories and methodologies poised to have disruptive effects on future work in the field.

The MS_DT concentration focuses on cutting-edge research in advanced fabrication techniques and digital design techniques. Project-based research led by innovative faculty in the college’s world class Digital Fabrication Lab provides a powerful platform for motivated students to explore novel construction approaches of designed objects at various scales.

Please visit taubmancollege.umich.edu/applyarchitecture for detailed information about the master of science in architecture requirements, application instructions, to schedule a visit, and to view sample schedules and course descriptions.
MS_DT Required Courses

The Master of Science in Architecture degree requires the completion of 36 credit hours carried out in 3 terms (10 months).

ARCH 701 – Theories in Digital Technologies (3 credits)
This course will introduce topics and precedents as a means of giving insight to research methods related to digital technologies. Students will complete the course with an understanding of crafting a research proposal and positing their propositions within a broader field of architectural design/research.

ARCH 702 – Material Engagement in Digital Technologies (3 credits)
This course will cover topics related to hardware, fabrication, and materials as related to advancements in digital fabrication. Beyond teaching the mechanics of specific machinery, the course will develop a framework for understanding exemplary projects in the field with a focus of different design methodologies.

ARCH 703 – Virtual Engagement in Digital Technologies (3 credits)
This seminar will cover a range of topics that include generative design, algorithmic design, scripting, parametric modeling, BIM, simulation, and analysis. Beyond the introduction to specific software packages, the course will develop a framework for different design methodologies and the relation to complex and dynamic geometry.

ARCH 714 – Master of Science in Architecture Proseminar
The Proseminar will engage interdisciplinary work, projects, and scholarship related to the MS areas of concentration (digital technologies, material systems, conservation, and design and health) — through lectures, class discussion, and guest lectures including experts in the MS concentration areas.

ARCH 700 – MS Practicum in Digital Technologies
The Practicum applies knowledge attained from the prerequisite courses towards project-based work in a ‘design laboratory’ setting. Students work individually and collaboratively on topics framed by the faculty’s research focus.

739-101 – MS Capstone in Digital Technologies
The Capstone is an intensive team-based research project under the direction of the Capstone faculty. The project is intended to be related to the research of the faculty as a means to investigate innovative aspects for the application of digital technologies. This work will be executed collaboratively in a format defined by the scope and demands of the project.

In addition to dedicated courses within the concentration, students are able to take 4 elective courses to advance their knowledge of related topics. A minimum of two of these electives must be university electives that allow for a connection to the university at large in order to gain exposure to research methodologies beyond the discipline.

For more information, please visit: taubmancollege.umich.edu/msdt
master of science in architecture: material systems
one year of focused design research
A material system is an assembly where interactions of matter and energies compute form, driven by complex constraints and feedbacks from manufacturing, environment and human interaction. The Master of Science in Architecture concentration in Material Systems (MS_MS) seeks to explore and exploit the unique material and spatial phenomena that emerge from the use of material methods and technologies. MS_MS provides motivated students with an opportunity to pursue architectural innovation within a context where design, composition and modes of production for scales from wearables to buildings have radically changed due to an increasing sophistication and pervasiveness of computationally driven design and fabrication technologies.

Material systems are examined for the ability to act in a responsive manner, by instrumentalizing their native material composition as well as introducing technologies for sensing and geometric transformation. Responsiveness is not confined only to degrees of morphability, but rather in how their extraneous qualities are transformational when placed in different contexts or experienced in different manners. Collaborative project-based research prioritizes design through examination, ongoing iteration and calibration of experiments, both virtual and real.

Candidates work in small collaborative teams with faculty at Taubman College and across campus in departments such as Material Science, Engineering, Computer Science, Interaction, Art & Design and the Center for Sustainable Systems. Taubman College and the University of Michigan possess unique resources, such as the Taubman College FABLab, the Duderstadt Center with Motion Capture Lab and Immersive Virtual Environment, the Environmental and Water Resources Engineering Lab, and the Engineering Research Center for Wireless Integrated MicroSystems. The Southeast Michigan region positions candidates in close proximity to some of the most advanced manufacturing facilities worldwide.

application
Please visit taubmancollege.umich.edu/applyarchitecture for detailed information about the master of science in architecture requirements, application instructions, to schedule a visit, and to view sample schedules and course descriptions.
TAUBMAN COLLEGE
architecture + urban planning

MS_MS required courses

The Master of Science in Architecture degree requires the completion of 36 credit hours carried out in 3 terms (10 months).

ARCH 706 – Theories in Material Systems
This course will provide a theoretical and discursive framework through which to approach material-based research and innovation within the discipline. Material systems will be situated within their physical, manufacturing, effective and ecological potentials. The course will cover literature, exemplary projects within the field as well as emerging paradigms and potentials for new work in the area of material systems.

ARCH 707 – Physical Pursuits in Material Systems
This technique-based course will cover topics related to material properties, behavior, performance, tooling, and manufacturing techniques. The course will focus, in part, on physical explorations in working processes related to the development of material assemblies, assessment of their behavior and effects, and their potential applications.

ARCH 708 – Technological Processes in Material Systems
This technique-based course will focus on computational design methodologies, which place materiality as a primary agent in the generation of complex morphologies. Topics covered will include topology, form-finding, computational simulation and analysis, and self-organizing self-structured systems. Work of the course will be combine material explorations with digital simulations.

ARCH 714 – Master of Science in Architecture Proseminar
The Proseminar will engage interdisciplinary work, projects and scholarship related to the MS areas of concentration (digital technologies, material systems, conservation, and design and health) — through lectures, class discussion, and guest lectures including experts in the MS concentration areas.

ARCH 700 – MS Practicum in Material Systems
The Practicum applies knowledge attained from the prerequisite courses towards project-based work in a ‘design laboratory’ setting. Students will work individually and collaboratively on topics framed by the faculty’s research focus.

739-101 – MS Capstone in Material Systems
The Capstone is an intensive team-based research project under the direction of the Capstone faculty. The project is intended to be related to the research of the faculty as a means to investigate innovative aspects for the application of material systems. This work will be executed collaboratively in a format defined by the scope and demands of the project.

In addition to dedicated courses within the concentration, students are able to take 4 elective courses to advance their knowledge of related topics. A minimum of two of these electives must be university electives that allow for a connection to the university at large in order to gain exposure to research methodologies beyond the discipline.

For more information, please visit:
taubmancollege.umich.edu/msms
master of urban design
The Master of Urban Design (M.U.D.) degree focuses on megacity and post-industrial metropolitan regions. The degree approaches urbanism from a metropolitan scale with studio projects prompting both analytical and speculative work related to infrastructure, urban housing, and precint-scale development in a single city. Globally-engaged and grounded in practice, the degree builds upon participants’ own design-based educational and professional experiences to introduce new knowledge in urban real estate, cultural humanities, and ecological consciousness to address complex problems facing global cities. Urbanism and the cultural humanities share an imperative to reflect cultural production while also projecting new notions of what individual and collective life could be. Urban real estate is positioned between the dynamics of private capital, public capital and the public good. Ecological consciousness at the metropolitan scale is articulated as a cultural imperative embedded in informal and formal landscapes, infrastructure and complex systems.

Urban design is posited as the synthesis of complex and overlapping systems of thought. As such, diverse contemporary and historical design methodologies are rigorously investigated for their potentials and pitfalls. The degree opens up new ground in its approach to catalyzing urban development through a range of methods that may utilize cultural formations and indigenous cultural production as a way of introducing new morphologies of urbanism and new building and spatial typologies.

The M.U.D. degree supports travel to the selected metropolitan region twice during the year-long course of study. International travel brings participants into direct contact with the communities and persons for whom they will be designing. It cultivates critical thinking and cultural competency.

Taubman College supports research and professional activities that include: Michigan-Mellon Project on Egalitarianism and the Metropolis — a 4-year research initiative on urbanization in Detroit, Rio de Janeiro, and Mexico City; Urban Development Now — an annual symposium featuring global leaders in urban real estate and development; Research on the City — a competitive faculty research grant program fostering interdisciplinary research on urban topics; Taubman College Lecture Series — engaging lectures by global leaders on contemporary topics; and M.U.D. Colloquium — informal student-led topical discussions on real estate and development.

Please visit taubmancollege.umich.edu/applymud for detailed information about the degree requirements, application instructions, to schedule a visit, and to view sample schedules and course descriptions.
master of urban design

A one calendar-year (summer half term, fall, winter, and spring half term), 52-credit, post-professional degree in urban design.

The year-long curriculum is comprised of a cohesive set of urban design studios that insist upon the centrality of design in any fundamental transformation of cities — with a studio-based design-centered curriculum and complementary extracurricular activities. The studios are complemented by seminars on urban real estate development, project development, theories and methods of urban design, law, and cultural humanities.

OneCity Studios

OneCity Studios explore metropolitan regions in the United States, Latin America, Asia and Africa, with an emphasis on megacities (Mexico City, 2014-15; Rio de Janeiro, 2012-13; Mumbai, 2013-2014) and post-industrial cities (Detroit, 2015-2016).

OneCity Studio I: Territories and Constituencies, examines the regional and infrastructural conditions of the metropolitan region and situates the contemporary tools of architectural and urban design representation in the context of communicating with municipalities, communities, capital markets, and non-profit entities.

OneCity Studio II: Settlement Spatialities, examines historical and contemporary patterns of housing; exposing participants to the challenges of delivering urban-scale density to diverse constituencies.

OneCity Studio III: Public + Private Spheres, examines precinct-scale sites with transformative potential and requiring innovative public and private financing; participants simulate the processes of attaining land control, assessing feasibility and programming options, and developing viable designs for both private and public space.

OneCity Studio: Capstone consolidates salient research in semesters 1-3 into provocative and speculative proposals for future development and ongoing research.

For more information, please visit: taubmancollege.umich.edu/urbandesign
urban and regional planning
Michigan Planning seeks to shape place-based policy and design for social equity and sustainability, regional solutions to metropolitan problems, just and effective remedies for urban decline, and the creation of human settlements that offer alternatives to environmentally consumptive land-development patterns.

Planning is a systematic, creative approach to addressing social, physical, and economic problems. By studying the interconnections between the various forces that shape places and the quality of life, planners identify problems and opportunities, devise alternative policies, analyze and implement these options, and evaluate implemented designs.

Urban planners are found throughout the public, private, and nonprofit sectors. You will find alumni of Michigan’s Urban and Regional Planning Program working in community development corporations, planning consulting firms, metropolitan planning organizations, international development entities, advocacy groups, municipal government, educational institutions, environmental agencies, land trusts, real-estate development firms, transit agencies, nonprofit think tanks, downtown development organizations, state agencies, federal agencies, and more. Urban planning graduates also serve as elected public officials at various levels around the country.

Common to work in all these settings is a concern for the quality of life in places, and a professional commitment to improving both human settlements and the public and private processes that shape their development. Taubman College is seeking newly graduating students and those with postgraduate experience to join our program.

Taubman College offers two degrees: a Master of Urban Planning and a Ph.D. in Urban and Regional Planning.
The Master of Urban Planning (M.U.P.) degree offers professional education in the planning field. Graduates apply their professional skills in various government agencies, private enterprises, or nonprofit organizations within a variety of subject areas.

Graduate education at Taubman College emphasizes the development of students' abilities to analyze, evaluate, integrate, and apply critical thinking in interdisciplinary planning processes. The course of study normally requires two years (four terms/full-time) for completion.

The M.U.P. degree, which is formally accredited through the American Planning Association and the Association of Collegiate Schools of Planning, takes a broad view of the scope of urban and regional planning. The core courses, about one-third of the credits, provide background for all areas of planning.

Concentrations include: Land Use and Environmental Planning; Housing, Community, and Economic Development; Global and Comparative Planning; Physical Planning and Design; and Transportation Planning.

M.U.P. requirements (48 credits)

1. statistics course (3 credits)*
2. economics course (3 credits)*
3. theory course (3 credits)
4. quantitative methods course (3 credits)
5. law course (3 credits)
6. fiscal planning course (2-3 credits)
7. planning practice course (3 credits)
8. concentration courses (9-12 credits)
9. capstone course (6 credits)

*These courses may be waived with appropriate prior coursework.

The Rackham Graduate School awards the Master of Urban Planning degree. Therefore, applicants are required to complete the online Rackham Graduate School admissions application. Admission is limited to fall term only.

Please visit taubmancollege.umich.edu/applyplanning for detailed information about the M.U.P. degree requirements, application instructions, to schedule a visit, and to view sample schedules and course descriptions.
The Ph.D. in Urban and Regional Planning trains scholars for careers in higher education, research, and high-level policy positions. It is a doctoral degree with a flexible, interdisciplinary focus. Graduates work in universities, government, nonprofits, and the private sector in the U.S. and around the world.

The curriculum integrates analytical methods, research design, a rigorous understanding of urbanization dynamics, and an examination of broader social theories, processes, and policies. Students address complex systems that typically encompass an array of spatial, environmental, social, political, technical, and economic factors. The emphasis is on theory, analysis, and action. Each student is also expected to demonstrate an understanding of the literature, theory, and research in a specialized area within the larger discipline of urban and regional planning.

Doctoral students specialize in a wide range of possible topics. Recent students have engaged in subjects as diverse as the political economy of public transit, suburbanization in developing countries, regional planning institutions, the effects of environmental contamination on patterns of urban and regional development, the culture of suburban commuting, the impact of tourism on historical Mediterranean cities, and the application of complex systems analysis to sustainable development.

The Rackham Graduate School awards the Ph.D. in Urban and Regional Planning degree. Applicants are required to complete the online Rackham Graduate School admissions application. Please visit taubmancollege.umich.edu/applyplanning for detailed information about the degree requirements, application instructions, to schedule a visit, and to view sample schedules and course descriptions.

Doctor of Philosophy in Urban Planning (Ph.D.)

concentrations

Land Use and Environmental Planning
This concentration prepares planners to work toward the long-term environmental and social sustainability of land use. The concentration focuses on training students to better inform private and public decision making processes related to land development, especially within the context of the ongoing issues of urbanization and suburban sprawl.

Housing, Community, and Economic Development
This concentration teaches students how to plan housing, neighborhoods, and the economic well-being of a community and the larger region. The goals of the concentration are to inform students how to increase social and economic capital and improve the quality of life, particularly in low-income, minority, and other disadvantaged communities.

Global and Comparative Planning
This concentration helps students: examine the interconnected social, cultural, and political-economic processes that frame patterns of urban development and planning in the United States and abroad; creatively and critically analyze the design and implementation of planning initiatives from a comparative and global perspective; work effectively in multicultural settings; empower marginalized populations; and facilitate collaborative practice.

Physical Planning and Design
This concentration enables planning students to contribute to the design, function, and sustainability of our communities. In this concentration, students: visualize scale, density, and the physical dimensions of different built structures, transportation systems, and infrastructure requirements; learn how to review site plans; study design philosophies; and learn how community participation can enhance design.

Transportation Planning
The transportation planning concentration builds an interdisciplinary range of skills and perspectives including an understanding of transportation's societal roles, applied technical and evaluation skills, and historical uses and misuses of transportation techniques to help foster local and regional accessibility.

Students can also create their own concentration.
Visit taubmancollege.umich.edu/concentrations for more information, including course listings and a typical class schedule.

urbanplanning
graduate certificate in real estate development
Effective developers need knowledge that spans numerous fields so the certificate recommends courses in several departments. Upon graduation, students are professionals equipped to become the place-makers of the next generation.

Students at the University of Michigan seek the certificate to complement their graduate study. Others, often already working in real estate development, supplement their backgrounds by obtaining the certificate without another degree.

Please visit taubmancollege.umich.edu/applyrealestate to learn more about the degree requirements and application instructions, to schedule a visit, and to view sample schedules and course descriptions.
graduate certificate in real estate development

17 credit hours in the following areas:
An introductory real estate development overview (3 credits)
Real estate finance and investment (at least 3 credits)
Real estate and land use law (at least 3 credits)
Real estate in the urban development context (at least 3 credits)
Design and implementation (at least 3 credits)
The integrative seminar (2 credits)

Up to 8 credits may be double-counted with the credits for a master’s degree or a Ph.D.

Due to real estate development’s interdisciplinary nature, courses for the certificate come from the University of Michigan’s business, law, urban and regional planning, natural resources and environment, landscape architecture, architecture, urban design, kinesiology, and engineering programs.

For more information, please visit:
taubmancollege.umich.edu/realestate
“Taubman College does far more for their students than any other school we recruit from.”

Recruiter from Chicago

Taubman College’s Spring Break Connections externship program allows students to gain experience in a work environment while developing marketable real-world skills. Gaining hands-on experience in a specific field gives the students a deeper understanding of their intended profession.

More than 200 Taubman College students spent their 2014 spring break observing and working with professionals during the first week of March, hosted at firms or organizations in 25 cities in 19 states.

The Career Services staff at Taubman College offer a variety of programs, services, and resources to assist students in exploring careers and securing internships and full-time positions. Employers of Taubman College graduates include public, private, and nonprofit organizations in the U.S. and abroad.

The college offers a series of workshops, alumni brown bag discussions, and career panels to assist students in developing job search skills, preparing for interviews, and exploring career options in architecture, design, and planning.

Students discuss their internship experiences at the M.U.P. Summer Internship Showcase

Students discuss their internship experiences at the M.U.P. Summer Internship Showcase

Every spring, Taubman College hosts a career and networking fair to bring architecture, planning, and urban design students into contact with practicing professionals from across the country to exchange information about career opportunities.

The reputation of our programs attracts employers from all over the country to meet our excellent students. Employers may attend the networking and career fair or schedule an individual visit to meet, interview and/or discuss career opportunities with students from all degree programs.

Taubman College’s Spring Break Connections externship program allows students to gain experience in a work environment while developing marketable real-world skills. Gaining hands-on experience in a specific field gives the students a deeper understanding of their intended profession.

This program is held during the week of spring break and is open to currently enrolled urban design, urban planning, upper-level undergraduate and all graduate architecture students. It provides a wonderful opportunity for students to shadow University of Michigan alumni or other professionals in the workplace, allowing them to apply their coursework and studio learning to a real-life setting. This knowledge helps prepare students for the transition from school to career.

More than 200 Taubman College students spent their 2014 spring break observing and working with professionals during the first week of March, hosted at firms or organizations in 25 cities in 19 states.

events
Taubman College provides access to international experts, interdisciplinary events, and unique programming hosted by more than 40 colleges and centers across the U-M campus. In formats as varied as conferences and lectures to workshops and intimate conversations, the college hosts leading practitioners and theorists in architecture and urban planning who enrich the classroom experience and provide unique perspective.

Taubman College has two exhibition galleries, one in the Art and Architecture Building and one at the Liberty Research Annex in downtown Ann Arbor. The program of 10 to 12 changing exhibitions per academic year showcases research projects by faculty, student degree work, and explorations of new ideas about architecture and planning from outside individuals and institutions.

Taubman College broadens the conversation about architecture, urbanism, and design by inviting renowned scholars, esteemed architects and designers, and experts from other disciplines with a vested interest in the built environment to lecture and critique student work. Over a dozen lectures are held each term and are generally given in the college auditorium on Friday evenings.

The college hosts major conferences that bring together national and international architects, planners, designers, theorists, and experts from other disciplines to explore issues of college-wide interest. Faculty and students also plan symposia, conferences, and events during the course of each term on special topics related to architecture and urban planning.

or center upon a particular set of pedagogical themes to be engaged in the studio context.

project / oberdick fellowship
The Oberdick Fellowship explores an aspect of architectural speculation and production. Fellows are provided with resources for the execution of a project that may take the form of a publication, installation, or any other material construction. Projects may range from the exploration of emergent building, fabrication, and environmental technologies to the realization of architectural works and endeavors typically unsupported within conventional models of practice.

research / sanders fellowship
The Sanders Fellowship supports individuals with significant, compelling, and timely research dealing with architectural issues. Research could focus on architectural, urban, landscape, cultural history or theory; architectural or environmental technology; or design studies. These agendas could emerge from recently completed doctoral dissertations or other intense and rigorous research formats. The fellowship will support both research and the development of research-related curriculum.

sojourner truth fellowship
This position is intended to recruit scholars who will bring issues of race and ethnicity into teaching and research in any substantive area related to urban and regional planning for a semester or an academic year. Professors on sabbatical, faculty beginning teaching careers, students who are writing dissertations, reflective practitioners, and individuals at any other stages of their careers are invited to apply. Applicants should have interest in educating both professionally oriented students and future scholars and are expected to be committed to scholarly and/or creative and professional work.

metropolitan detroit fellows
Four to six recent alumni from Taubman College’s architecture program are selected as fellows each year to conduct research on metropolitan Detroit and to be instructional faculty in an intensive program in architecture and design for high school students. Based in midtown Detroit, fellows divide time between research and teaching, and are expected to participate in monthly colloquia with their peers and engage with the local intellectual community. Research proposals must address urban and/or architectural issues related to metropolitan Detroit, may be speculative or applied, and may relate to larger issues of post-industrialization, class, politics, and urbanization.

experience: student life
Taubman College provides an outstanding academic environment and fosters a community of students, practitioners, academics, and researchers who share the ideal that architecture, planning, and design play a critical role in shaping the future of our planet. Members of Taubman College come together for events, lectures, social gatherings, and for many, the college becomes a family and a home.

Being a part of Taubman College means you are also part of the larger University of Michigan community. With 19 schools and colleges, over 20 libraries, 220+ degree programs, and one of the world’s largest populations of living alumni, U-M provides an excellent forum for interdisciplinary research and collaboration. Taubman College utilizes Michigan’s excellent and wide-ranging facilities for a variety of academic and social purposes.

Ann Arbor is a vibrant and cultured city of about 116,000 people. The city sponsors a variety of events and festivals throughout the year, notably the Ann Arbor Folk Festival, the Ann Arbor Film Festival, and the Ann Arbor Art Fair (the largest in the midwest). Local activities include kayaking on the Huron River, taking in a movie at the majestic Michigan Theatre, eating at the famous Zingerman’s Deli, and visiting shops and restaurants on bustling Main Street.

Detroit provides a great collection of cultural and entertainment attractions including the Detroit Institute of Arts, Comerica Park, and the Detroit Zoo. But perhaps more significantly it provides a design lab for students and faculty alike. Studios often use Detroit as a site for projects exploring urban revitalization strategies, re-use, urban farming, and to create full-scale installations.

technology
The University Library’s Spatial and Numeric Data Services (SAND) Lab provides assistance with searching for, working with, and managing spatial data, and provides resources for more effective use of Geographic Information Systems (GIS) technologies. Geospatial data and GIS tools are critical to understanding the complexity of the built and natural environments.

The Digital Fabrication Lab (FABLab) leverages state-of-the-art industrial technology to perform architectural research. Taubman College is the leading architecture institution utilizing cooperative robotic automation to perform subtractive machining, additive fabrication, forming, and automated-assembly processes. These technologies only recently garnered the attention of the architectural fabrication industry. The FABLab’s world-class resources include: Five 6+ axis robotic systems for additive, subtractive, forming, and assembly research; two 3-axis and one 5-axis CNC Routers that machine wood, foam, or aluminum based on a digital model; two CNC Mills that machine metals, including stainless and aluminum, manually or using CAM software; CNC Waterjet that cuts 2-dimensional profiles from sheets of material; Zund Knife Cutter that cuts through fabric, plastic, and paper; 3D Digitizer that allows one to generate points in a digital modeling program based off a physical model; five 3D printers, both ABS and plaster based, allowing rapid prototyping directly from 3D models; and a Stoll knitting machine.

The Wood Shop is a fully-equipped, 6,000 square-foot facility that also houses plastics and metal working equipment and CAD-driven laser cutters for wood, paper, and plastics. The Metals Lab provides tools, equipment, training, and workspace for projects involving sheet metals and steel structural sections. MIG (metal inert gas) welding stations, metal shears, and brakes, as well as cutting and bending equipment are available. The Metals Lab allows for a range of fabrication in support of studio and thesis work, research, and design-build projects.
computing environment

Taubman College maintains a computing environment in which information technology is easily accessible and available to students. The college’s ubiquitous software deployment allows students access to software any time they are in the building.

other resources

Computing: 62 lab computers, multiple self-service printers and scanners, high-speed wireless access throughout the building

Art + Architecture Shop: 32 woodworking tools, 8 metalworking machines, 2 vacuum formers, outdoor staging space

Media Center: 7 plotters, 1 color printer, 1 black and white printer, 1 black and white KIP oversize printer, bindery, guillotine stack cutter, large format scanner

LaserCAMM Facility: 5 laser cutters

Duderstadt Center/Library: 600,000+ printed volumes, over 250 architecture-related journal subscriptions, 400 computers, wireless, audio and video labs, open 24/7

Staff: The facilities have professional staff that oversee and guide the work that occurs within the shops and labs. Training programs are available for students.

Tutorials: Some trainings are available online: taubmancollege.umich.edu/tutorials

Hours: Shop and media center hours extend into the evenings and the weekend for students’ convenience. The college has laser cutters and 3-D printers available in studio for student use 24-7.

For more information, please visit: taubmancollege.umich.edu/resources
travel
International elective courses are an essential part of Taubman College, granting students the opportunity to visit other countries while gaining access to facilities, groups, and individuals that might otherwise be closed to them. Travel courses complement the core curriculum, situating course content within a global context. The college has established partnerships with other programs around the world in order to promote a global cross-cultural exchange.

Recognized by the University of Michigan as a leader in offering travel opportunities abroad to students, the college offers travel opportunities to Africa, Europe, North and South America, and Asia. Professors also incorporate international experiences into the curriculum with travel to countries across the world. Students interested in other travel-related study are able to pursue them through other U-M schools and colleges. (www.globalportal.umich.edu)

This diversity of interests leads students not just to the traditional locations of Europe, but to the villages and global cities of the developing world. Courses provide exciting and unique educational, research, and service opportunities. Elective courses vary each year with faculty research interests, contacts, and topics that mandate immersion experience. International courses are available during the spring half term to all undergraduate and graduate students.

Taubman College’s elective travel courses are respected as some of the most diverse international course offerings by any U.S. design institution.

To learn more and read travel course blogs, visit www.taubmancollege.umich.edu/travel.

taubmancollege.umich.edu/travel
doctor of philosophy in architecture
The Doctor of Philosophy (Ph.D.) invites applicants who wish to investigate the multifaceted discipline of architecture in depth. Students embarking on a doctorate conduct original research that yields new insights into past, current, and future developments of architecture and building practices. Doctoral Studies faculty members train independent critical thinkers and research specialists capable of altering current understanding of our field.

The University of Michigan’s Ph.D. in Architecture was one of only four such programs in the United States when it was established in 1968. Since that date, the program has continued to evolve in response to changes in the discipline and the profession. Studies currently underway at U-M testify to rapidly shifting disciplinary boundaries and increasingly global outlooks in the field overall, particularly in areas in which our faculty are strong, such as global modernism, media practices in architecture, space syntax, structural modeling, envelope design, and urban history. U-M’s remarkable research facilities allow our students to develop remarkable interdisciplinary research projects with partners across campus. The Horace H. Rackham Graduate School awards the Ph.D., generally after five or six years of study.

Architectural doctoral studies at the University of Michigan are currently organized into three subfields: Building Technology (BT); Design Studies (DS); and History/Theory (HT). These three provide a framework within and between which students and faculty define new research formations and subfields. Students entering the doctoral studies track are often (but not always) graduates of professional schools of architecture. Upon arrival, they embrace a specialization in which qualified faculty support them with one faculty member playing the role of major advisor. Students move through the program by defining an individual course of study in contact with other units on campus, with a minor advisor selected by the student from one of these units. The doctoral curriculum culminates in a dissertation guided by major and minor committee members from within the university and in some cases outside of it.

A broad array of resources support our students, including extensive research libraries and computing and laboratory facilities that are among the best in the country. Students are encouraged to seek out resources that are necessary to develop and carry out topics of research, particularly for the dissertation, if these are unavailable on campus. Doctoral students win prestigious fellowships from U-M as well as the Fulbright Program, the American Academy in Rome, the Social Science Research Council, the Getty Foundation, The Mellon Foundation, and others. Although most of our graduates take teaching positions in four-year colleges and universities, some return to professional practice, occupy positions in research institutions, or complete post-doctoral training.
Ph.D. requirements

40 credits of coursework
Preliminary Examinations
One Foreign Language Examination (HT only)
Dissertation Proposal
Doctoral Dissertation

Please visit www.taubmancollege.umich.edu/architecturephd for detailed information about the Ph.D. requirements, application instructions, scheduling a visit, sample schedules, and course descriptions.

University of Michigan
Taubman College of Architecture and Urban Planning
Architecture Summer Program
ArcStart is a three-week long residential program that offers high school students the opportunity to explore the built environment firsthand through an introduction to architectural design. Participants will experience the rewarding intensity of an engaging college architecture studio, partake in skill-building workshops that reinforce analytical and conceptual problem solving skills, and visit architecturally significant projects in Ann Arbor and the immediate region.

**Curriculum**

Over the course of the program, students will witness how a design education prepares students to engage the world around them within the context of a rigorous academic setting at a leading design institution. Students will engage in thought provoking discussions that challenge their understanding of architectural design and push them to think more broadly about space and the built environment. The curriculum is aimed at introducing and enhancing a wide variety of skill sets including hand drawing, model making, diagramming, photography, and sketching. Students will employ a variety of digital and analog tools to aid in the design process of their own projects and will also be introduced to the possibilities of advanced 2D and 3D modeling and printing facilities at the college’s advanced Digital Fabrication Lab.

**Residential Life**

Living on the University of Michigan’s North Campus, students will experience the collegiate lifestyle and have opportunities to strengthen their academic skills, develop a peer support network, and familiarize themselves with the campus and its resources. In addition to a rigorous academic schedule, there will be plenty of time to relax and unwind with new friends and partake in a variety of evening and weekend activities organized by the live-in residential counselors. These include software tutorials, pick-up basketball games, afternoons at an outdoor pool, movie nights, sketching scavenger hunts, and more. Students also have access to the North Campus Recreation Building, which offers a full range of sporting and workout equipment.

**College Preparation**

In addition to academic and social aspects of the program, students will benefit from presentations conducted by the Office of Financial Aid and the Office of Undergraduate Admissions on how to prepare for their college experience. Although the presentations are based on University of Michigan programs, they will help guide students and parents in the college process regardless of the institution.

At the end of the three-week session, students will come away with an expanded understanding of the role architecture and design plays in everyday life, and those intending to apply to architecture school will be well equipped to begin the process.

**Tuition**

The program cost is $3,000, which includes housing, most meals, program fees, excursions, access to the recreation center, and studio supplies. It does not cover travel expenses to and from the program, medical expenses, insurance, and daily personal expenditures. Limited scholarships are available for students that express financial need.
A week in the life of an ArcStart student:

DAY 1
Morning: Sketching in the Field
Afternoon: Drawing exercises
Evening: Photoshop tutorials

DAY 2
Morning: Technique - Drawing a Plan
Afternoon: Model-building exercises
Evening: Recreation Center

DAY 3
Morning: Lecture - Late Modern Architecture (1945-70)
Afternoon: Design Studio – Picnic Pavilion
Evening: Explore the Ann Arbor Art Fair

DAY 4
Morning: Workshop – Reconstructing the Farnsworth House
Afternoon: Design Studio – Pin-Up/Review
Evening: Movie Night

DAY 5
Day: Excursion to the SANAA-designed Glass Pavilion and the Frank Gehry Center for Visual Arts in Toledo, Ohio
Evening: Catered dinner in studio

Plus campus tours, informational sessions, festivals, afternoons at the pool, and more!

For more information, please visit:
