

Wood Framing (3) Syllabus

CATALOG DESCRIPTION

Timber as material, properties. Framing with wood (light wood framing, heavy timber framing, laminated timbers). Design and selection of components. Connections of elements (nailing, bolting, timber connectors). Lateral loads and response thereto are also studied. Prerequisite: Arch 324 or equivalent.

OBJECTIVES

Students are familiarized with analysis and design of wood structures using the NDS-ASD code as well as load calculation based on ASCE – 7 (including dead, live, wind and snow load calculation). In addition techniques used to design with modern wood engineered products are explored. Topics covered include: sawn lumber, Glulam, LVL, I-joists, plywood panels, and stressed skin elements. The students will also explore architectural examples of contemporary wood design using case studies.

ORGANIZATION

The course is lecture based (synchronous with posted videos of lectures), and the concepts and procedures are taught in this context with classroom and homework problems solved by the students. Computer facilities, including software, are available for supporting computational work in the BT-Lab. Testing equipment and tools are also available for the construction project.

EVALUATION

Evaluation is based upon one exam (midterm); a series of online problems (approximately one per week) spaced throughout the semester; a group computer analysis project (STAAD.Pro); and a special project. All work will be set on a 100 point scale with grades assigned as follows:

	A	100 – 93.0	A-	92.9 – 90.0	
B+	89.9 – 87.0	B	86.9 – 83.0	B-	82.9 – 80.0
C+	79.9 – 77.0	C	76.9 – 73.0	C-	72.9 – 70.0
D+	69.9 – 67.0	D	66.9 – 63.0	D-	62.9 – 60.0
	E	59.9 – 0.0			

By University policy the minimum passing grade is a D (63.0).

Scores for the grades are proportioned as follows:

Midterm	30%
Homework Problems	40%
Class Project	15%
STAAD Projects	15%

PROBLEMS

Homework problems covering the primary aspects of the course will be given out periodically throughout the semester. Late solutions to problems will be penalized -5% per day up to a maximum of -35%...

TEXTS

The required text is the *NDS-2018* code, available at <http://www.awc.org/Standards/nds.html>
In addition a copy of *Design of Wood Structures* by Donald Breyer is available in electronic format on Canvas. Another good resource is *The APA Engineered Wood Handbook* also posted on our Canvas site.

COURSE WEB SITE

Course notes will be maintained through a course web site <http://www.umich.edu/~arch544>
This will include homework submissions. Some material may also be posted on the Canvas site.
